

Earthstar Geographics and Spatial Mapping Announce Partnership for Sale of TerraColor® Global Satellite Imagery

25 January 2006 - Earthstar Geographics LLC (San Diego, CA, USA) and Spatial Mapping Ltd. (Prince George/Nanaimo, BC, Canada) announced a strategic partnership whereby Spatial Mapping will resell Earthstar's TerraColor® simulated true color 15-meter digital earth imagery product via their ResMap.com website. The full resolution TerraColor imagery can be accessed free for on-line use or offline purchase on a per-tile basis. TerraColor is built from imagery captured by the Landsat 7 (ETM+) satellite, and provides seamless, tonally balanced coverage of most of the world's land areas (excluding Antarctica). Applications include land use analysis, vegetation mapping, military/defense logistics, 3-D visualization, flight simulation, accurate cartographic mapping and many others.

"ResMap is one of the premier on-line distribution networks for satellite imagery, and we are excited about the ability to let users view and purchase TerraColor on-line in their fast, interactive website," said Eric Augenstein of Earthstar Geographics.

"The superb quality of the TerraColor imagery makes it an important addition to our online products. The combination of free on-line usage and affordable off-line pricing makes this dataset the most accessible natural color 15-meter product available in the market today", said Adam Inglis of Spatial Mapping Ltd.

Visit www.resmap.com for product specifications, pricing, and free on-line use or offline purchase. Please contact info@resmap.com for regional purchases, reduced resolution products, custom file formats and projections. For more information on TerraColor, visit Earthstar's www.terracolor.net website.

About Earthstar Geographics LLC

Earthstar Geographics LLC specializes in products and services for the geospatial data industries. With nearly 20 years experience in remote sensing and image processing, the company has performed projects and training in 15 countries worldwide. The TerraColor imagery products are the latest in their line of digital earth imagery. Visit www.es-geo.com for details.

About ResMap

ResMap, a division of Spatial Mapping Ltd, has been serving satellite imagery covering the global since 2002, and is now serving over 10 Terabytes of data. The entire world's land mass is covered with variety of different satellite sensors including Landsat 5/7, RadarSat, IKONOS, QuickBird and SPOT-5. All imagery is available for free online use and can be brought directly into end user's GIS/RS/CAD/MS Office applications with the use of free plug-ins. Imagery is also available for off-line use at affordable prices.
